# Embedding Maps Using Google

Guide by Rosalind Kidwell for use by the Newcomb Digital Research Interns

Embedding maps on your website is actually super easy! You can put a map on your website with Google's My Maps tool. The first step is to create your personalized map, on www.google.com/map and select +CREATE A NEW MAP. Then, you'll want to add points to your map.

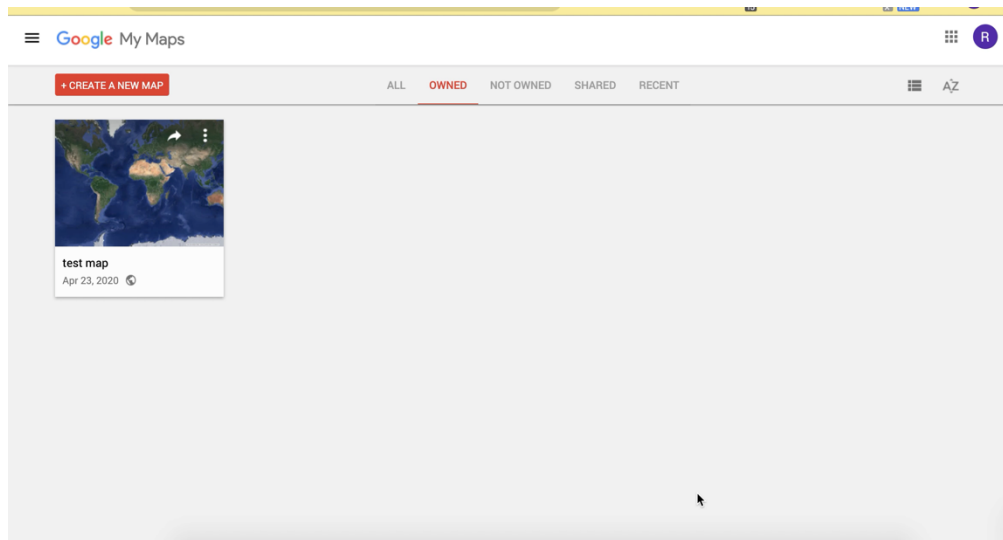

Video demonstration

LINK IF VIDEO ISN'T DISPLAYING: https://youtu.be/zIYPa-D-7Zw

The video here shows a basic demonstration of adding a marker to the map, including multiple images and videos.

Generating HTML

Once your map is made, you can add it to your website with a custom HTML element. Google will generate this HTML element for you, as I've shown in the video below. Once you have the HTML element, you can simply put this directly onto WordPress.

Sample code is shown here, but you won't need to generate this yourself. Feel try :

<iframe
src="https://www.google.com/maps/d/u/0/embed?mid=1KWZHP1SyntbpWcJhd9m2gLLAhUv86-UF" width="640" height="480"></iframe>
